SUMMARY

From my decade of experience in the Software Industry, I have worked on couple of softwares which impacted millions of lives. Challenges and innovations are and have been my drives; and impacting company budget and people's live with my skills has always been my satisfaction.

I am very dedicated to the work I commit to. I am very productive under pressure. I work well in Team as much as individually, I do not require monitoring or coordination, but at the same time I am a very good teammate with leader qualities. Delivery on time is my top priority. I can easily breakdown complex problems to easy one to solve and I lead by examples not instructions.

I am more than willing to elaborate on how working on Start up and Corporate helped me to craft my skills and understand the importances of working under limited ressources, and Software Engineering principle. Thousands words would not be enough to elaborate on my experience.

TECH SKILLS

| Web Development | Mobile Development | Blockchain |
